Sequence 800, Application US/09764853

Patent No. US20020090672A1

GENERAL INFORMATION:
APPLICANT: ROSEN et al.
TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
FILE REFERENCE: P3706

CURRENT FILING DATE: 2001-01-17

Prior application data removed - consult PALM or file wrapper

NUMBER OF SEQ ID NOS: 939

SOFTWARE: PATENTIN Ver. 2.0

SEQ ID NO 800
LENGTH: 800

TYPE: PAT
ORGANISM: Homo sapiens
FEATURE:
NAME/KEY: SITE
LOCATION: (197)
OTHER INFORMATION: Xaa equals any of the naturally occurring L-amino acids
NAME/KEY: SITE
LOCATION: (201)
OTHER INFORMATION: Xaa equals any of the naturally occurring L-amino acids
NAME/KEY: SITE
LOCATION: (887)
OTHER INFORMATION: Xaa equals any of the naturally occurring L-amino acids
NAME/KEY: SITE
LOCATION: (887)
OTHER INFORMATION: Xaa equals any of the naturally occurring L-amino acids
NAME/KEY: SITE
LOCATION: (887)
OTHER INFORMATION: Xaa equals any of the naturally occurring L-amino acids
NAME/KEY: SITE
LOCATION: (887)

Dev. 57:33-45(1996).

I FUNCTION: MAY ACT AS POSITIVE AXONAL GUIDANCE CUES.

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: IN ADULT, ONLY DETECTED IN BRAIN.

BYELOPMENTAL STAGE: DIFFERENTIALLY EXPRESSED IN EMBRYONIC ADULT TISSUES. ITS ABUNDANCE DECREASES FROM ELO TO BITH.

SIMILARITY: BELONGS TO THE SEMAPHORIN FAMILY.

SIMILARITY: CONTAINS 1 SEMA DOMAIN.
                                                                                                                                                                                                     DOMAIN

Biochem. Biophys. Res. Commun. 247:597-604(1998).

-i- FUNCTION: LIKELY TO BE A POTENT INHIBITOR OF ANGIOGENESIS IN
BRAIN AND MAY PLAY A SIGNIFICANT ROLE AS A MEDIATOR OF THE P5
SIGNAL IN SUPPRESSION OF GLIOBLASTOMA. MAY FUNCTION IN CELL
ADHESION AND SIGNAL TRANSDUCTION IN THE BRAIN.

-i- SUBUNIT: INTERACTS WITH BAPI.

-i- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. LIKELY TO BE
CONCENTRATED AT CELL-CELL ADHESION SITES.

-i- TISSUE SPECIFICITY: SPECIFICALLY EXPRESSED IN BRAIN. REDUCED (
EXPRESSION IS OBSERVED IN SOME GLITORILAGROUM CERT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC This sequence is the human HPT-1 protein. The invention relates to CC purified proteins (I) that bind specifically to at least one of the CC gastro-intestinal (GI) tract receptors human intestinal CC gastro-intestinal (GI) tract receptors human intestinal CC sucrose-isomalitase complex (hSI) (I) provide active transport of CC sucrose-isomalitase complex (hSI) (I) provide active transport of CC therapeutic agents through human and animal GI tissue (into the blood) CC for in vivo delivery, particularly for treatment or prevention CC migraine, or angina pectoris. Specifically they are used to deliver CC insulin or leuprolide, but many other suitable therapeutic agents are CC disclosed, including genes or inhibitory nucleic acid, imaging agents and CC antigens. (I) may also provide targeting to the GI tract. Other uses of CC in are: (i) to determine the level of specified receptors in a sample CC in informanosasays; The antibodies are used to raise antibodies and in immunosasays. The antibodies are used to locate, detect and CC measure (I), e.g. for imaging, monitoring treatment, tissue analysis CC etc., also for peptide purification and immobilisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The present invention describes colon tumour associated proteins (I) and the polynucleotides (II) that encode them. (I) have cytostatic activity. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP) expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by creatifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the proteins own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host cell culturing the cell to express the protein. (II) and its complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and

(I) may also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. Anti-(I) antibodies and antagonists may also be used to down regulate TCAP expression and activity. The anti-(I) antibodies may also be used as diagnostic agents for detecting the presence of TCAPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AAI28460 to AAI29512 and AAM24494 to AAM24523 represent nucleotide and amino acid sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                      661
